五组测试结果说明

- test_scwssod_fusion_intersection.log：先用 fusion_intersection 这套训练标签训练 train.py，再用 test.py 在固定 5 个公开测试集上评估得到。
- test_scwssod_fusion_larger.log：先用 fusion_larger 这套训练标签训练 train.py，再用 test.py 在固定 5 个公开测试集上评估得到。
- test_scwssod_fusion_union.log：先用 fusion_union 这套训练标签训练 train.py，再用 test.py 在固定 5 个公开测试集上评估得到。
- test_scwssod_only_dot.log：先用 only_dot 这套训练标签训练 train.py，再用 test.py 在固定 5 个公开测试集上评估得到。
- test_scwssod_fusion_larger_weighted_e39.log：这是在 fusion_larger 基线训练的基础上做的一个逐像素加权版本，标签语义仍然保持 fusion_larger 不变，即前景为 1、背景为 2、未知为 0；区别在于训练时额外读取了 fusion_intersection，把其中与 fusion_larger 前景重合的区域视为高置信前景，在 loss 里赋予更大的像素权重（默认 2.0），其余有效标注像素权重为 1.0、未知区域忽略不参与损失，因此它相当于只改了 fusion_larger 的监督强度分配，没有改原始伪标签本身，最后再加载可用的 model-39.pt 用 test.py 在固定 5 个公开测试集上评估得到。
